Our advantages

Deadlines

The guarantee of the delivery terms established with the client after studying the tasks and the validation of the development phases

Quality

We have an internal quality validation procedure and also modern management methods

Resources

Romania is among the main IT providers (development, maintenance, quick network intervention) with a mobile and strong personnel that has a real adaptation capacity

Complete flexibility in terms of price and delivery, payment per day or project, intervention possibility for all technical needs

Costs

NSD proposes very favorable prices for your projects compared to a software company; you reduce an important part of your structure costs, particularly those regarding the work contracts, and thus you manage in a flexible way your expenses until the end of your projects

Who are we?

New System Design (NSD) is an IT company located in Bucharest, Romania, a country with a very strong IT tradition.

Romania has become a member of the European Union and its economic growth is one of the highest in Europe. Bucharest is situated at two hour travel by plane of any European city and most of the active population speaks English or other EU official language. The "cultural" distance is clearly smaller than that of the other companies with competitive costs situated in India, Ukraine, China or South America.

New System Design is perfectly integrated in a European working environment (France, Belgium, Germany etc.), having collaborations since 2003 with international business corporations.

Our strengths

The client oriented policy and the fast adaptation to its needs, to the market changes, the open spirit of the management and developers, the competitive call center services (available 24/7 via network and communicating with the users), the technologies used in the development of IT projects (the best quality/price ratio) ensuring the success and the continuity of NSD on the IT market – a very competitive and continuously evolving market.

The quality of the products is assured by the internal NSD procedures of quality checking, but also by the exceptional qualification of the team: our developers have in fact an established experience in the implementation of large size systems and the call center has a two year experience in the management of IT solutions. The personnel is trained regularly for the new technologies in order to be informed about the most recent approach and work methods and thus answer best to our clients' expectations.

Technologies

Contact us for the complete list of technologies!

Development :

Languages: Java, C/C++, ASP, PHP, JavaScript, HTML, XML, Visual C, Visual Basic, J2EE, J2ME... on the environments Windows, Linux, Unix, Free BSD

Data Bases: IBM DB2, MySQL, Oracle, Postgres, SQL Server, MS Access etc.

Technologies: EJB, Struts, Hibernate, Spring, JSP, Servlets, Corba, servers web (Oracle, WAS, Apache, Tomcat, Orion etc.), .NET, CORBA, SWING, AWT etc.

Analysis Methodologies: UML (RUP), OMT, Merise, SSADM etc.

Platforms : Eclipse-based, Microsoft Visual Studio, JBOSS etc. (according to the client's needs)

Call Center & Exploitation

Interventions : by phone (VoIP to lower the costs), Internet : remote connection, ftp, mail

Specific tools developed internally for the automatic updates, ticketing applications, tools for report generation

Our services

The services provided by **NSD** have 2 directions :

- development
- call center

Development

NSD - development proposes :

- design and implementation of software by Intranet and Internet (client server solutions)
- design and implementation of single-user applications
- design and implementation of databases
- high level graphics (professional, for applications and for Internet sites)
- solutions and integrations of e-commerce products
- CRM, ERP, company-oriented solutions
- track&trace applications
- products that ensure the communication between already existent systems that are too expensive to re-develop
- consultancy in informatics (development, design, methodologies, project management, technical and financial analysis of IT projects, study of the functional needs and editing of the functional tasks book)
- application maintenance
- reverse engineering and et redevelopment of IT projects

Call Center & Exploitation

The **NSD** technical team is at your disposal for:

- maintenance of the networks and the IT infrastructure (routers, computers, switches, Active Directory, Windows and Linux server administration); management of Internet sites, updates, administration of users profiles etc.
- administration of various applications for the client (interventions in a particular domain - Internet, transport, e-learning...) with the help of specific tools

Contact

Do you need help in the developing of software, consultancy, specialists at your disposal?

Do you need network technicians, exploitation technicians, help or remote assistance for your users?

Do you have a medium or long term project, difficult to manage in terms of resources, budget or infrastructure?

If you have answered « **YES** » at least once, do not hesitate to contact us!

We have a team ready to answer your needs, with a real experience in development, analysis, online help and call center!

Contact us to have the optimum solution for the best price!

Our performances

New System Design develops your projects on the basis of payment per day or project, with the best technologies existing on the market and with the best quality/price ratio.

The performances cover all the operation types with a budget settled before the start and a result commitment.

The delocalization (one of the modern development concepts) offers you various choices of software developers and non-developers, starting with Internet profiles and data-entry up to the conceiving and development of large systems.

We guarantee the availability of competent personnel, the best results and very favorable prices.

Contact us by mail, fax or phone in order to find out more and set the first appointment!
